Unified Protection Without the Overhead

Reliably reliable protection that's delivered by the same people who built your network.

✓ **Layered Protection** | ✓ **Always-On Monitoring** | ✓ **Proactive Threat Response**

Powered by Fortinet — DQE's Managed Security combines Fortinet's Unified Threat Protection platform with our locally managed SOC to deliver enterprise-grade defense for every connection.

Building a full-scale security operation in-house takes deep pockets and nonstop staffing. Digital transformation has expanded the attack surface for every organization. DQE's Managed Security makes enterprise-grade protection attainable.

With DDoS mitigation, managed firewalls, and SOCaaS (Security Operations Center as a Service) working together, you get layered defense without the overhead. Everything is deployed, monitored, and maintained by local engineers who move fast, communicate clearly, and own your uptime.

Because reliability isn't just about staying online, it's knowing your protection team responds before the second ring.

Better Managed Security from DQE

- **24/7/365 Eyes on Glass** — Certified engineers monitor and respond in real time
- **Threat Hunting** — Our team proactively detects suspicious activity before it escalates
- **Compliance Made Easy** — Audit-ready reports, SIEM log retention, and policy oversight simplify meeting HIPAA, PCI DSS, and other requirements
- **Smarter Response** — Automated alerts backed by expert intervention deliver speed and accuracy
- **Forensics and Insights** — Post-incident reporting strengthens defenses for the next challenge
- **Seamless Integration** — SOCaaS connects with your existing systems and workflows to keep operations smooth and secure

Three Layers of Defense

DDoS Mitigation

Stops volumetric floods and stealthy app-layer attacks before downtime hits. Continuous monitoring detects and filters threats in real time.

Managed Firewall

Prevents intrusions, malware, and unauthorized access with Fortinet-powered firewalls configured by DQE engineers. Simplifies security management across sites.

SOCaaS

Provides 24/7 monitoring, SIEM log correlation, and rapid incident response by certified security experts—keeping you protected around the clock.

Who We Protect

Healthcare Providers

HIPAA-ready monitoring that keeps patient care secure and available.

Financial Institutions

PCI-compliant protection for transactions, data, and fraud prevention.

Manufacturers

IoT and supply-chain defenses to prevent costly shutdowns.

Remote Workforces

Centralized protection that follows your users wherever they work.

Government and Education

Reliable uptime for public services and digital learning platforms.

Tested. Trusted.
Reliably Reliable.™

100% — 100% owned fiber backbone with self-healing ring architecture (<50ms reroute)

5,000+ — 5,000+ route miles and 3,000+ on-net buildings

24/7/365 — Local monitoring and support available 24/7/365

Why DQE

Not the Biggest.
Just the Most Responsive.

Since 1997, DQE has built and protected the networks that power Pittsburgh and beyond. Our infrastructure is utility-grade. Our engineers are local. And our security operations are built on urgency, transparency, and respect for every customer.
